NAVIGATING COMPLEXITIES: ADDRESSING CONTEMPORARY CHALLENGES IN THE FIELD OF PRISON STUDY¹

Milena Milićević, PhD

Institute of Criminological and Sociological Research

Nikola Vujičić, PhD

Institute of Criminological and Sociological Research

In prison studies, project implementation encounters a range of complex challenges. These encompass access to prison populations, as gaining entry to correctional facilities for research purposes can be demanding due to security and privacy concerns, forcing researchers to navigate bureaucratic processes and gain the trust of correctional authorities. Ethical considerations are important, as well, and research with imprisoned individuals requires ethical balancing, especially regarding informed consent and the vulnerable position of prisoners. The next one is related to data collection and privacy. Safeguarding prisoners' privacy and confidentiality while collecting essential data can be difficult, and researchers must ensure that the collected data do not compromise the security and privacy of the individuals involved. In addition, the stigma associated with imprisoned individuals can affect their willingness to participate in research, and researchers need to be aware of these factors. When it comes to resource constraints, limited resources, either in terms of funding and personnel, can interfere with or slow down comprehensive data collection

¹ This research was supported by the Science Fund of the Republic of Serbia, Grant No. 7750249, Project title: Assessment and possibilities for improving the quality of prison life of prisoners in the Republic of Serbia: Criminological-penological, psychological, sociological, legal and security aspects (PrisonLIFE).

This paper represents the result of the authors' engagement in accordance with the Working Plan and Programme of the Institute of Criminological and Sociological Research for the year 2023 (based on contract No. 451-03-68/2022-14) with the Ministry of Science, Technological Development and Innovation.

and analysis. Regarding policy and legal changes, modifications in laws, policies, or regulations can affect ongoing projects, demanding adaptability and responsiveness from researchers. Successful projects often require transdisciplinary collaboration, involving academics from various fields, such as criminology, penology, social rehabilitation, psychology, sociology, and law, and non-academic experts (e.g., community members, policymakers, practitioners), which can be complex to coordinate. Furthermore, prison studies often involve complex data, including sociodemographic, criminological, and health-related information, and researchers must deal with this diversity in their evaluation frameworks.

As to dissemination/communication efforts, to share knowledge and research findings with policymakers, prison authorities, and academic and non-academic public effectively, researchers need to bridge the gap between academia and practical applications. Concerning public perception, projects in prison may face resistance or negative public perception, particularly if they question prevailing beliefs or practices. Researchers need to address these concerns and engage with the public adequately. Evaluating the long-term impact of interventions or policies in the correctional system requires dedicated resources and consistent, but flexible methodologies to capture dynamic and broader societal context. If the research connects multiple countries, dealing with different legal and penological systems, as well as cross-cultural considerations, can complicate the project. These challenges underscore the importance of detailed planning, ethical considerations, and transdisciplinary collaboration in prison studies or projects. Researchers must maintain flexibility and innovative approaches to address these issues effectively.

Key words: Prison Populations, Ethical Considerations, Research Challenges, Project Implementation, Resource Constraints
